Technical review

Item #3 · intermediate.crl · Run ID: 20261113T232802Z-2f0fe5

Path	`R:\evidence\certs\intermediate.crl`
Size (bytes)	458
Last modified (UTC)	2026-11-12T06:00:00Z
Extension	.crl
Detected type (signature)	X.509 certificate revocation list
Status	No issues found
Case	RV-SAMPLE-001
Evidence ID	E0003
Case registry	Verified: identical to the registered evidence
Registered at intake (UTC)	2026-11-13T23:27:52.795Z

Hashes

sha256	`888c2e483ad86a072a759a3bdd58dd0242d0302394ac04d0acc309d1c4651e9e`
md5	`a015a8a50a11e5cc5081a4e4bcd88d4b`

Findings

None

Method

Each file was opened read-only, hashed in a single pass with the selected algorithms, and checked against a table of file signatures. Every action was written to a hash-chained audit log.

Audit trail

Audit entries	#14 – #17
Log folder	`R:\case\runs\rv-certcheck\20261113T232802Z-2f0fe5\logs`
Digital signature	This PDF is not digitally signed.

Limitations

- Every chain is judged at one instant (--at, recorded in each report); the same certificate can be valid at one date and expired or revoked at another.
- Offline, revocation is checked only against the CRLs and OCSP responses supplied (--crl, --ocsp, or found among the evidence); a revocation published elsewhere is not seen.
- Trust lists are used as dated snapshots (date and SHA-256 recorded); services added, suspended or withdrawn after the snapshot are not reflected.
- In version 0.1 the trust list's own XAdES signature is not verified; the snapshot's source and SHA-256 are recorded so it can be checked independently. The Colombian list is a curated file, because ONAC publishes no machine-readable list.
- Certificates issued by Rakvor's internal PKI are for internal use only: they are not a firma digital under Ley 527 de 1999, art. 28 (Colombia), and not qualified certificates under eIDAS (Regulation (EU) No 910/2014).
- The tool's results have been compared with OpenSSL and Python reference implementations on test sets, but no error rate has yet been measured on a validated corpus.
- A result without findings does not prove that a file is authentic or unaltered before acquisition.

- Modification times come from the file system of the examined copy and may differ from the original source.
- A trusted timestamp of the audit log shows that the log existed in this exact form at the stated time; it does not show that the examined copy matches the original source.
