# Customer summary

WhatsApp Chat with Ana Ruiz.txt · Evidence ID: E0010 · Case: RV-SAMPLE-001

## Needs attention

The file was hashed and checked. Some points need attention.

This export was converted into 3 RSMF file(s) holding 10 event(s) from 1 conversation(s); every file passed the RSMF 2.0 schema, the stricter checks and the read-back test.

### What we did

Each file was opened read-only and hashed in a single pass with the selected algorithms. Chat exports were read into one model (participants, conversations, messages, attachments), local times converted to UTC with the examiner's time zone, and written as RSMF 2.0 files, one per conversation per day, then checked against the RSMF 2.0 schema and read back. Every action was written to a hash-chained audit log.

### What we found

- Date order inferred from the export. Numeric dates were read as dmy: line 11 ("13/03/2026, 18:45") can only be read that way.
- Media not included in the export. 1 message(s) say the media was omitted when the chat was exported ("without media").
- Referenced file not found. 1 attachment(s) are named in the export but the file is not in it: IMG-20260302-WA0002.jpg.
- Participants known only by phone number. 1 participant(s) appear only as a number (not in the exporting phone's contacts): +33 6 00 00 00 01.
- Local times converted with the examiner's time zone. The export's times carry no UTC offset; they were read as Europe/Paris and stored in UTC. The original text of each time is kept in the event's custom field source_time.
- Deleted messages are not exported. WhatsApp exports leave out messages deleted before the export; the RSMF can only contain what the export contains.

### Digital fingerprint

This fingerprint identifies the exact content of the file. Any change, even of one character, would produce a different value.
