Findings

[Informational] File belongs to a chat export (PART_OF_EXPORT)

What it shows	This file is part of the export WhatsApp Chat with Ana Ruiz.txt (media or attachment) and was converted with it.
What it does not prove	It does not show which message refers to it; see the trace map.

Method

Each file was opened read-only and hashed in a single pass with the selected algorithms. Chat exports were read into one model (participants, conversations, messages, attachments), local times converted to UTC with the examiner's time zone, and written as RSMF 2.0 files, one per conversation per day, then checked against the RSMF 2.0 schema and read back. Every action was written to a hash-chained audit log.

Audit trail

Audit entries	#5 – #8
Log folder	`R:\case\runs\rv-rsmf\20261113T232759Z-440d07\logs`
Digital signature	This PDF is not digitally signed.

Limitations

- The RSMF files reproduce the export as delivered, not the phone or account: messages deleted before the export, unexported media and edit history are not in them.
- rv-rsmf converts; it does not authenticate. A chat export is a text or JSON file that can be edited before it reaches the examiner; corroborate it with a forensic extraction or the other party's copy.
- Files are checked against the published RSMF 2.0 schema and read back; how a given Relativity version displays them was not tested by this run.
- Reactions are mapped with a fixed table of Relativity emoji shortcodes (checked 2026-10-27); other reactions are kept as text.
- Type detection uses a limited table of common file signatures; unknown types are reported as unknown, not as

suspicious.

- Modification times come from the file system of the examined copy and may differ from the original source.
- A result without findings does not prove that a file is authentic or unaltered before acquisition.
- A trusted timestamp proves the audit log existed in this exact form at the stated time; it does not prove that the examined copy matches the original source.
